

KISELRING

rotating silicon-wafer halo · Ø1.0 m · 1.8 kg

kisel (Swedish): silicon

×1

9 × Ø300 mm wafers · 252:28 = 9:1 internal drive · no tools on the frame

!

in the box

hardware

not included: wall bracket with two #10-24 pan heads, 56 mm apart (see step 4)

1

nose first, under the lip — then drop the tail

2

#6 x2

snug only — the pocket does the holding

3

push on until the collar seats — no glue needed

4

hang on both screws · slide toward the centre · leave loose for now

bracket screws: #10-24 pan heads, 56 mm apart, heads 4 mm proud

5

×9

flat on the bench · slide straight down · edges only on the glass

3/9

6/9

9/9

the last dovetail closes the circle — do not force; if it fights, a joint is not seated

6

x2

two people hold by the frame, never the glass
ring support (rollers) per the traveler — this manual covers the drive

7

~0.4 mm

a hair of backlash,
not a bite

slide the plate until the teeth just kiss, back off a hair, tighten both bracket screws

8

one slow lap by hand — smooth everywhere, no clicks, no rubs

9

5V

~1 rpm of quiet, self-holding rotation · done
